

Accessory | KS031-DS10

The KS031-DS double-end cable connects in particular the detector coil with an extension cable (watertight) that has on its opposite end a plug for connecting to the MDV... or MU... amplifiers.

The KS031 special connection cable is specially designed for use with the Series 3000 of metal detectors. Due to its solid construction and polyurethane sheath, it will not generate any disturbances that could initiate an error signal in the amplifier.

KS031-DSXX Special length up to 50 m with plug connectors.

TYPE	KS031-DS10
Product ID	p81052
Description	extensions cables KS031-DS, 10 m, IP 68
